

## Engineered Containment Cell

EP Risk Management Pty Ltd (EP Risk) was engaged to validate an engineered containment cell constructed at a site contaminated with slag and ash fill material sourced from the former Newcastle BHP Steelworks site. The validation assessment was required to facilitate provision of a Site Audit Statement and receipt of an occupational certificate from the planning authority.

### Services Provided

- Groundwater monitoring and validation sampling of the capping layer.
- Provision of a Site Validation Report.

### Project Outcome

The results of a groundwater assessment and validation sampling and testing of the capping layer facilitated provision of a Site Audit Statement and Occupation Certificate.

**Project Title:**  
Engineered Containment Cell

**Client:**  
Freight and Logistics Company

**Location:**  
Carrington, NSW
